SUMMARY

Software Development Engineer (Fresher) with a focus on backend systems, scalable APIs, cloud infrastructure, and distributed applications. Strong foundation in Data Structures & Algorithms, Operating Systems, and Object-Oriented Programming.

TECHNICAL SKILLS

- **Languages:** Java, Python, C++
- **Core CS:** Data Structures & Algorithms, Operating Systems, Linux, Computer Networks, DBMS, Object-Oriented Programming
- **Backend:** FastAPI, Node.js, Express.js, REST APIs, GraphQL, Microservices
- **Frontend:** React.js, Next.js, HTML, CSS
- **Database:** MongoDB (NoSQL), MySQL
- **Cloud & Infrastructure:** AWS, Docker, Kubernetes (Basics), Containerization, CI/CD
- **AI / ML:** Generative AI, NLP
- **Soft Skills:** Problem Solving, Communication, Team Collaboration

PROJECTS / EXPERIENCE

ServiceHub – AI Chatbot Platform | [Github](#)

- Built a React AI chatbot using Gemini API for intelligent service matching and natural language interactions.
- Created an NLP engine to extract user data from chat messages for automated form-filling and smart navigation.
- Engineered a persistent chat experience using React Context to maintain session state across page transitions.
- Designed a modern, responsive UI with Glassmorphism to streamline the service discovery and submission flow.

RidePal – AI Ride Fare Assistant | [Github](#)

- Designed and developed scalable backend APIs using Flask and MongoDB to handle real-time ride queries with low latency.
- System Integration: Designed RESTful Flask API to bridge Gemini AI with React frontend for real-time ride tracking.
- Full-Stack UI: Engineered a React & Flask app with a responsive, premium "ChatGPT-style" dark-mode interface.
- AI Optimization: Refined response accuracy via contextual prompting for precise trip insights and fare analysis.

Syla: AI-Powered Menstrual Health Companion | [Github](#)

- AI Health Reports: Integrated Gemini AI to automate medical-style health assessments from user wellness logs.
- Predictive Tracking: Built a React Native app for predictive cycle tracking and daily symptom logging.
- Backend Engineering: Developed a FastAPI & Firestore backend for real-time data persistence and health insights.
- AI Data Integration: Engineered a JSON-based parser to map unstructured LLM outputs into structured UI components

EDUCATION

B.Tech, Computer Science Engineering (2022–2026) — Keshav Memorial Institute of Technology

ACHIEVEMENTS

- Solved 300+ DSA problems on LeetCode and GeeksforGeeks
- Processed and analyzed 10,000+ rows using Pandas and SQL in ML projects
- Java Masterclass (Udemy, 2025) | Generative AI Certificate (GeeksforGeeks)
