Summary

Computer Science Engineering student (2026) with strong foundations in Java, data structures, and backend development. Experienced in building scalable full-stack applications using JavaScript, Node.js, Express, and MongoDB. Passionate about writing clean, maintainable code and solving real-world problems through software engineering.

Skills

- **Languages:** Java, Python, C/C++
- **Frontend:** React.js, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind, Bootstrap
- **Backend:** Node.js, Express.js, REST APIs, GraphQL
- **Database:** MongoDB, MySQL, Redis
- **Tools & DevOps:** Git, GitHub, Docker, Postman, CI/CD, AWS, Vercel, Netlify

Projects

ServiceHub – Chatbot | [Github](#)

- Developed a MERN stack web application connecting users with professional service providers through a responsive, mobile-first UI.
- Integrated **Google Gemini API** into backend services to enable conversational query handling and real-time responses.
- Implemented service management with CRUD operations using MongoDB and Express.js for efficient backend functionality.
- Designed a modern, engaging UI with React.js and CSS3 (glassmorphism effects) to enhance user experience.
- Reduced response latency by ~30% by optimizing backend API calls and request handling.

RidePal – AI-Powered Ride Fare Assistant | [Github](#)

- A modern, intelligent web assistant that helps users get cab fare estimates, trip details, and multilingual support via conversational chat.
- Developed a full-stack ride assistant web application for estimating ride fares and assisting users in real time.
- Integrated **Google Gemini API** to parse natural language ride queries and provide intelligent responses.
- Supported multilingual inputs with automatic language detection and translation (via BHASHINI or custom NLP pipeline).
- Handled 1,000+ test queries with <200ms average response time during simulated usage.

Choti Bhojan Yatra - Food Redistribution App | [Github](#)

- Developed a MERN + React Native platform to minimize urban food waste by connecting restaurants, NGOs, farmers, and volunteers.
- Implemented GPS tracking, smart routing, and disaster-relief mode for efficient food distribution.
- Designed gamified volunteer engagement and multi-language support to increase accessibility.
- Built real-time monitoring dashboard with Firebase auth, notifications, and AI-driven food registration.
- Integrated **Google Gemini API (Flash 2.5)** into backend workflows to assess food quality signals and support decision-making for safe food redistribution.

Education

2026 **Keshav Memorial Institute of Technology** : Computer Science

2022 **Narayana Junior College**: Science

2020 **Kendriya Vidyalaya No:1 Uppal**

Core CS: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Databases.

Certificates

- **UDEMY** :Java Masterclass 2025.
- **GEEKSFORGEEKS**: Mastering Generative AI and ChatGPT [Certificate](#)

Activities

- **Hackathons:** Participated in multiple hackathons; built rapid prototypes and delivered end-to-end demos under time constraints.
- **Cybersecurity:** Participated in a Capture The Flag (CTF) cybersecurity event conducted at the Salesforce office.
